

COINMONIE AML/CFT/CPF POLICY

Risk-Based Controls for Stablecoin Conversion, Payments, and API Settlement

- **Version:** 1.0
- **Effective Date:** August 14, 2026
- **Compliance Contact:** compliance@coinmonie.com

1. Purpose and Scope

This Anti-Money Laundering, Counter-Terrorist Financing, and Counter-Proliferation Financing Policy (the "Policy") establishes the framework by which Moniemax Digital Technology Solutions Limited dba Coinmonie ("Coinmonie", "we", "us") prevents, detects, and reports money laundering, terrorist financing, proliferation financing, sanctions evasion, fraud, and related financial crimes.

This Policy applies to both business entity clients (via KYB) and individual retail clients (via KYC). It governs all directors, officers, employees, contractors, agents, products, websites, applications, conversion services, payment flows, and settlement APIs operated by Moniemax Digital Technology Solutions Limited dba Coinmonie.

Detailed operational workflows, screening logic, monitoring thresholds, alert scenarios, reporting formats, and investigation procedures are maintained in restricted operational manuals managed directly by the Money Laundering Reporting Officer ("MLRO").

2. Governing Framework and Jurisdiction

Moniemax Digital Technology Solutions Limited dba Coinmonie complies with all applicable statutes, regulations, license conditions, directives, and enforceable regulatory requests. The governing framework includes, without limitation:

- The Money Laundering (Prevention and Prohibition) Act 2022;
- The Terrorism (Prevention and Prohibition) Act 2022;
- Central Bank of Nigeria (CBN) and Securities and Exchange Commission (SEC) AML/CFT/CPF regulations;
- Nigerian Financial Intelligence Unit (NFIU) reporting standards; and
- Applicable data protection laws and directives concerning virtual asset service providers (VASPs).

Jurisdiction & Dispute Resolution: This Policy and all contractual or non-contractual obligations arising out of or in connection with Coinmonie's compliance obligations shall be governed by and construed in accordance with the laws of the Federal Republic of Nigeria. Any dispute, controversy, or claim arising under or relating to this Policy shall be settled by arbitration in accordance with Nigerian law, and the seat of arbitration shall be Nigeria.

3. Governance and Accountability

- **Board of Directors:** Approves this Policy, sets the enterprise risk appetite, receives quarterly compliance reports, and ensures adequate resource allocation for compliance tools, systems, and personnel.
- **Money Laundering Reporting Officer (MLRO):** Appointed by the Board, the MLRO possesses complete operational independence, senior executive access, and direct oversight from the Board. The MLRO owns all regulatory reporting and holds ultimate authority to restrict, pause, or terminate any user relationship or transaction.
- **Lines of Defence:** Business operational units form the primary line of defence. The Compliance Function designs and manages risk assessment, onboarding, screening, monitoring, and reporting workflows. Internal Audit or an independent external reviewer periodically tests control design and effectiveness.
- **Escalation & Protection:** Commercial growth targets never override financial crime controls. Employees must escalate suspicions to compliance@coinmonie.com and are fully protected against retaliation for good-faith reporting.

4. Enterprise-Wide Risk Assessment

At least annually and prior to launching any material product, fiat corridor, asset class, blockchain network, or corporate partnership, Moniemax Digital Technology Solutions Limited dba Coinmonie performs an enterprise-wide risk assessment. This evaluation measures customer type, geographic reach, delivery channel, transaction structure, partner integration, and technological vulnerability.

The risk framework accounts for the cross-border, rapid, pseudonymous, and irreversible nature of virtual asset transfers, self-hosted wallets, privacy-enhancing obfuscation services (mixers), chain-hopping, stablecoin de-pegging risks, money mule networks, and API aggregation protocols.

Risk Appetite Statement: Moniemax Digital Technology Solutions Limited dba Coinmonie strictly prohibits relationships or transactions involving sanctioned entities or individuals, shell banks, anonymous or fictitious accounts, unlicensed nested financial services, or activities lacking an identifiable, lawful economic purpose.

5. Customer Acceptance, KYC, and KYB Due Diligence

5.1 Baseline Customer Verification

Moniemax Digital Technology Solutions Limited dba Coinmonie requires full identity verification for all customers prior to opening an account, executing transactions, or granting access to platform features. Anonymous accounts, pseudonymous profiles without underlying identity verification, and unverified transactional access are strictly prohibited.

5.2 Individual Due Diligence (KYC)

Prior to granting platform access, Coinmonie collects and verifies identity information proportional to the user's risk profile. Standard KYC requirements include:

- Full legal name and date of birth;
- Nationality and residential address;
- Verified contact details (phone number and email);
- Government-issued identification number and document verification;
- Occupation and verified source of funds; and
- Biometric liveness check and visual identity verification.

5.3 Business Entity Due Diligence (KYB)

For legal entities and corporate clients, Coinmonie executes rigorous Know Your Business (KYB) checks before service enablement. KYB requirements include:

- Certificate of Incorporation and constituent corporate documents;
- Register of Directors and proof of operating and registered address;
- Identification and verification of ultimate beneficial owners (UBOs) holding direct or indirect ownership or voting control above statutory regulatory thresholds;
- Identification and authority verification of designated account administrators and authorised signers; and
- Corporate profile evaluation, including source of funds/wealth, legal business purpose, anticipated transaction volumes, and operating jurisdiction profiles.

5.4 Enhanced Due Diligence (EDD)

EDD is automatically triggered for high-risk profiles, including Politically Exposed Persons (PEPs), family members or close associates of PEPs, complex corporate structures, high-risk geographic corridors, nested service providers, darknet or mixer interactions, and unusual transaction velocity.

EDD measures require senior management approval, verified source-of-wealth documentation, deeper corporate ownership tracing, wallet provenance validation, and tighter transactional limits.

6. Sanctions, PEP, and Adverse Media Screening

Moniemax Digital Technology Solutions Limited dba Coinmonie screens all individual clients, corporate entities, direct and indirect beneficial owners, authorised account controllers, and relevant blockchain wallet addresses at onboarding and continuously thereafter.

Screening is conducted against official Nigerian designation lists, United Nations Security Council Sanctions lists, foreign regulatory lists, PEP databases, and adverse media channels. Confirmed matches result in immediate account rejection, freezing/blocking of funds where legally required, notification to the MLRO, and report submission to competent authorities. Tipping off affected parties is strictly forbidden.

7. Transaction and Blockchain Monitoring

Moniemax Digital Technology Solutions Limited dba Coinmonie operates real-time and post-trade transaction monitoring covering fiat payment rails and virtual asset wallet transfers. Monitoring systems evaluate velocity, transaction values, counterparty profiles, geographic indicators, device metadata, and blockchain heuristics.

Suspicious patterns including transaction structuring, rapid circular fund movements, mismatched counterparty names, multi-account device sharing, API manipulation, and interactions with high-risk smart contracts are automatically flagged for manual compliance review.

8. Transfer Rules and Counterparty Due Diligence

For cross-border virtual asset transfers subject to originator and beneficiary data transmission mandates ("Travel Rule"), Moniemax Digital Technology Solutions Limited dba Coinmonie securely transmits, verifies, screens, and stores required counterparty information. Coinmonie will not process transfers lacking required counterparty details unless permitted under explicit, risk-assessed operational procedures. Self-hosted wallet transactions undergo ownership verification and enhanced risk assessment.

9. Suspicious Activity and Regulatory Reporting

All employees, officers, and contractors must immediately escalate suspected money laundering, financing of terrorism, proliferation financing, or fraud directly to the MLRO at compliance@coinmonie.com.

The MLRO evaluates escalations, maintains audit trails of all decisions, and submits Suspicious Transaction Reports (STRs), Suspicious Activity Reports (SARs), and mandatory threshold reports to the NFIU, SEC, CBN, or relevant agencies within statutory timelines. All internal escalations and external filings remain strictly confidential under applicable tipping-off prohibitions.

10. Recordkeeping and Data Protection

10.1 Retention Period

Moniemax Digital Technology Solutions Limited dba Coinmonie retains all CDD, KYC, and KYB identification documents, corporate registration files, transaction ledgers, blockchain analysis history, monitoring logs, alert investigations, and compliance audit files for a minimum of five (5) years following the termination of a customer relationship or completion of an individual transaction. The retention period automatically extends in the event of ongoing legal holds, active litigation, regulatory directives, or law enforcement inquiries.

10.2 Data Privacy & Deletion Protocols

All personal and corporate data collected under this Policy is stored, processed, and secured in strict alignment with Coinmonie's Data Privacy Policy and governing data protection laws.

Where a customer requests data removal under Coinmonie's Data Deletion Policy, statutory AML/CFT/CPF recordkeeping obligations supersede contractual deletion requests. Coinmonie shall securely archive mandatory compliance data for the required statutory retention period before permanent, secure destruction.

11. Partners, Agents, and API Clients

Moniemax Digital Technology Solutions Limited dba Coinmonie performs risk-based due diligence prior to onboarding liquidity providers, banking partners, custodians, identity verification vendors, blockchain analytics providers, and API institutional clients.

Contracts must clearly delineate obligations regarding due diligence, screening, recordkeeping, incident reporting, and audit rights. API business clients are prohibited from offering downstream nested access to third parties without prior written consent from Coinmonie and must supply end-user KYC/KYB data upon request.

12. Training, Independent Testing, and Board Reporting

- **Staff Training:** Role-based compliance training is mandatory upon hire and conducted at least annually across all business units.
- **Independent Testing:** An independent internal audit team or qualified external consultant reviews control design, monitoring effectiveness, API integrations, and rule configurations at least annually.
- **Management Information:** The Board of Directors receives quarterly reports summarising enterprise risk profiles, onboarding metrics, alert statistics, regulatory reporting counts, system performance, and remedial actions.

13. Policy Review and Breach Management

Failure to comply with this Policy may result in disciplinary action up to termination of employment, service contract cancellation, client offboarding, civil litigation, or referral to legal authorities.

This Policy is formally reviewed at least annually by the MLRO and updated as necessary to reflect evolving legal, operational, and regulatory changes. Material changes require formal approval from the Board of Directors of Moniemax Digital Technology Solutions Limited.

Approval and Governance Signature

- **Approved by:** Board of Directors, Moniemax Digital Technology Solutions Limited dba Coinmonie
- **Policy Owner:** Money Laundering Reporting Officer (MLRO)

- **Official Compliance Escalations:** compliance@coinmonie.com
- **Regulatory Oversight Bodies:** SEC, CBN, NFIU, and designated Nigerian Authorities
